

Automotive Service Councils of California

In-Person Training Event

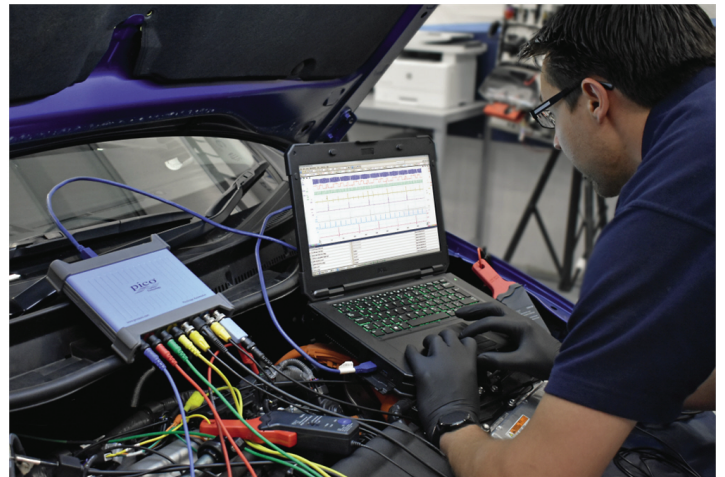

September 11, 2021

8:00 am - Noon

The Marriage of Scan Tool Data and Automotive Lab Scopes

Enter the automotive lab scope, the equipment that will allow us to verify true “raw” data values including inputs and outputs. This “verification” will allow us to determine the accuracy of the computer’s decisions. In this class, I will demonstrate with several case studies and logical diagnostic approaches how there truly is a “perfect marriage between the scan tool and automotive lab scope.” This class is well suited for the technician and management teams.

Additionally, Adam Robertson along with local shop owners can present how they use their “Pico Club” to support local techs, shops, and schools.

PRESENTER

Adam Robertson

Adam has 15+ years experience as a technician and trainer in the automotive industry. He is an ASE Certified Master Automotive Technician with L1. Adam has been involved in racing and has

owned his own training company in the Seattle area. His dynamic teaching style is contagious ensuring a positive learning experience for CTI customers. Adam has been with CTI since 2000 and teaches in California, Oregon and Washington.

Event Location

AESWave

5465 East Hedges Ave.
Fresno, CA 93727
